This conference is the continuation of the first (Singapore, December 5-9, 2000) and second (Beijing, June 25-28, 2007) successful Global Conferences on Economic Geography. The two conferences were significant in spurring on economic-geographical dialogue in a sustained manner worldwide. In organizing the Third Global Conference on Economic Geography, we have three specific objectives:

1. The conference will provide a forum for constructive cross-regional dialogue among economic geographers from all regions and countries. Such dialogue is critical for the advancement of the subject.
2. The conference will provide a unique opportunity for economic geographers to discuss path-breaking concepts, ideas, frameworks and theories in economic geography, enhancing the global interdependence of networks for economic geographers.
3. The conference and its associated activities will enable economic geographers to interact with geographers and other interested social scientists to explore the dynamics of the global economic transformations.

The organizer “Institute of Space & Economy” is an independent research center with specific focus on spatial economy. Its major research fields include economic geography, regional economics, regional development, regional planning and sociology.

The mega-trends of knowledge-based information society and globalization have significantly changed the economic landscapes during the last two decades. Along with such changes, there has emerged in the world a long spectrum of countries from rich to poor on the one hand, while on the other, there also come forward diverse regions from rich to poor within a national economic space. It is important to analyze the processes of the dynamic economic landscapes resulting from the diverse external forces, such as the financial crisis and the global mega-trends, and to provide appropriate regional and national development strategies to overcome the confronted problems. The ISE was founded in January 2010 in order to conduct researches on the regional issues and to suggest regional strategies.

The ISE aims to contribute to the development of regional community and the welfare of people through conducting researches on the problems and changes of the regional industries and economy, and diffusing results of the researches to various regions and countries. Especially, researches on both policy issues and theories on the regional industrial and economic development in Korea are conducted in order to contribute to the regional industrial policies of Korea and regional economic development policies for developing countries. Furthermore, the ISE also attempts to develop the Korean model of regional development based on diverse experiences of problem-solving and actual policy applications of the academic research accomplishments, and to diffuse the Korean experiences to developing countries.
